

At iNNO Answers, we develop highly advanced, responsive and interactive solutions for a diverse set of requirements, including social enablement, social commerce, internal applications, etc. Through our comprehensive gamut of enterprise-level scalable solutions, we enable businesses achieve streamlined efficiencies, wider reach and greater benefits.

iNNO Answers specializes in architecting, developing and implementing high-performance social media and web-space solutions that encourage brand-customer interactions and bring higher consumer engagement. Therefore, we stay abreast of cutting-edge tools and technologies in IT, so we continue to deliver enhanced value proposition to our clients.

## What We Bring to the Table?

Having worked in diverse domains and sectors, our team members possess extensive experience in numerous technologies and platforms across a varied range of requirements. We are therefore adept at delivering highly customized, robust and scalable solutions.

## Web 2.0 & 3.0

Our extensive expertise in Web 2.0 and 3.0 technologies enables us develop interactive social networking sites and blogs, as well as high-performance web applications with innovative business delivery models.

## HTML 5.0

We leverage the advanced features of HTML 5.0 to develop web applications with high levels of interoperability and flexibility to enhance, extend and rationalize markup available for documents.

## Microsoft Technologies

We are highly adept at several Microsoft technologies, including .NET, SharePoint, etc. We develop robust, scalable and reliable enterprise project management (EPM) solutions, platform migration, packaged solutions, collaboration, .NET architecture consulting and application integration.

## Java Technologies

Through our comprehensive domain expertise and in-depth knowledge of all Java technologies (jQuery, JSP, etc.), we design and develop high-performance, scalable and platform-independent solutions for a wide range of requirements.

## Open Source Technologies

Using Open Source technologies to develop highly flexible and scalable products, enables us to offer maximum customizability to our clients. We possess expertise in several Open Source technologies, such as Mono, Apache, Zenoss, MySQL, Open Solaris, etc.

## Mobile Technologies

Owing to our immense domain expertise in mobile technologies, we develop customized, interactive and highly scalable mobile solutions and applications for a broad set of requirements, including Android and iOS. Our mobile solutions deliver immersive, on-the-go user experience.

- Enterprise-Level Scalable Architecture

### Application Architecture

- J2EE/ AJAX/ JQUERY/ RESTFUL web services
- Application Servers like Weblogic, JBOSS, Jetty, etc.
- Search Engine Integrations like Lucene, Elastic Search, etc.
- Caching Tools & Techniques like Memcached
- ORM Tools for Database Access
- No-SQL Databases for Faster Access

### Deployment Architecture

- Build, Test, Deploy and Integrate
- Horizontal Infrastructure Scaling with Multiple Nodes
- Cloud Computing

- Database Administration/  
Business Intelligence

- Oracle RAC 11g
- OBI (Install/ Deploy/ Maintain
- MySQL
- Mongo

- Open Source Technologies

- Drupal/ Joomla/ Moodle
- Zencart

- Mobile Application Development

- iOS/ Android Technologies

## The iNNO Answers Differentiator

- Rich Experience Across Diverse Frontend & Backend Technologies
- Highly Adept at Developing the Best-Fit Solution
- Highly Qualified Team with Extensive Knowledge Across Domains and Sectors
